Exactly....let's try to set up a call after the new year.

Hi Rob,

I spoke with Scott about this....they're working on finalizing the database, and need about another 3 to 4
weeks to finish. That said, we're curious about what the group is actually looking for. Perhaps we should
set up a quick call to discuss?

Thanks,
Stephanie

Hi Scott,

Just checking in to see if there has been any progress on the EQuIS database topic yet. Any movement? Please let
me know if there is anything I can do to help facilitate this.

Best Regards,
Mark

That should work for us our database is on SQL server. I'll need to come up with a schedule and discuss this with
EPA and my IT folks.

Thanks for the update Scott. To us, the simplest method for doing this would be for you to create a zipped .bak
backup file of your EQuIS database (assuming you are using SQL server version) and send to us. There shouldn't be
any schema licensing issues as we have the necessary licenses with EarthSoft and use that method with other
parties. Will that work for you?

Mark things are going pretty well and the holiday was rather relaxing.

We have migrated the PREMIS databases into EQuIS. We are currently working on polishing some things up to get the data sets normalized, specifically the CAS_RNs related to non-standard compounds (for example total and homolog results in particular) and some location coordinates still seem "off". That being said I believe we can begin discussing how best to transfer data to CPG.

Hi Scott,

Hope things are well and that you had a good holiday weekend. The purpose for this email is to inquire about the status of the CDM transition of the legacy PREMIS databases for the Lower Passaic and Newark Bay projects over to and EQuIS database format. Please correct me if I'm wrong but my understanding is that when CDM came on the project the you converted the LPR historical databases from the 'PREMIS' format to an EQuIS database. What we are looking to do is update the CPG database with the most current version of the 'PREMIS' data that CDM is managing now so that we can be confident that the CPG/ddms is working off of the same information/format that EPA/CDM is when it comes to historical data. Preferably we would like to get this data in an EQuIS format as we know CDM has been working with the data in that platform and we believe this would be the most efficient means for transferring the data. If this is something you think might be possible we could take the discussion to the next step of how to transfer and schema licensing etc., but first I would like to know where the PREMIS à EQuIS effort stands.   If you could let me know what you think I would appreciate it.

Best Regards,

Mark
